                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               241 VFIVCWLPAFSILLIDYACPVHSCPILYXAHYXFAVSTLNSLINPVIYTWRSRDLRREVL 300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 3, Application US/09274752D
; Sequence 3, Application US/09274752D
; Patent No. 6812335
; GENERAL INFORMATION:
; APPLICANT: An Gongalu
; TITLE OF INVENTION: Human Polypeptide Receptors for Lysophospholipids and
; TITLE OF INVENTION: Sphingolipids and Nucleic Acids Encoding the Same
; FILE REFREENCE: A-67501/DJB/TAL
; CURRENT APPLICATION NUMBER: US/09/274,752D
; CURRENT FILING DATE: 1999-03-23
; NUMBER OF SEQ ID NOS: 29
; SEQ ID NO 3
; SEQ ID NO 3
; LENGTH: 353
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      180

Patent No. 5856443

GENERAL INFORMATION:
APPLICANT: MacLennan, A. John
TITLE OF INVENTION: Molecular Cloning and Expression of
TITLE OF INVENTION: G-Protein Coupled Receptors
NUMBER OF SEQUENCES: 14
CORRESPONDENCE ADDRESS:
ADDRESSEE: Saliwanchik, Lloyd & Saliwanchik
STREET: 2421 N.W. 418t Street, Suite A-1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                phosphate (SIP). SIP is a bioactive lysophospholipid that elicits diverse physiological effect on most types of cells and tissues. When expressed in rat HTC4 hepatoma cells, is capable of mediating SIP-induced cell proliferation and suppression of apoptosis. SUBCELDULAR LOCATION: Integral membrane protein. SIMILARITY: Belongs to the G-protein coupled receptor 1 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       InterPro; InterPro; InterPro; InterPro; InterPro; InterPro; InterPro; IPR004061; 2...

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                                                                                                                            the sphingosine 1-phosphate receptors EDG-1, EDG-3, and EDG-5.";
J. Biol. Chem. 274:18997-19002(1999).
-!- FUNCTION: Receptor for the lysosphingolipid sphingosine 1-
phosphate (SIP). SIP is a bioactive lysophospholipid that elicits
diverse physiological effect on most types of cells and tissues.
-!- SUBCELIVIAR LOCATION: Integral membrane protein.
-!- TISSUE SPECIFICITY: Expressed in all developing tissues with
highest levels detected in primitive, transformed cells. Relative abundance: lung > kidney = skin = gut > spleen > brain > liver.
-!- SIMILARITY: Belongs to the G-protein coupled receptor I family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 MGGLYSEYLNPEKVQEHYNYTKETLDMQETPSRKVASAPIIILCCAIVVENLLVLIAVAR

Indentification, chromosomal location, and genome organization of mammalian G-protein-coupled receptors.";

Genomics 18:175-184(1993).

C. -- FUNCTION: Receptor for the lysosphingolipid sphingosine 1-phosphate (SIP). SIP is a bloactive lysophospholipid that elicits diverse physiological effect on most types of cells and tissues.

C. -- SUBCELLULAR LOCATION: Integral membrane procein.

C. -- TISSUE SPECIFICITY: Most abundant in heart and lung; low, but clearly observed in kidney, liver and thymus; much lower but detectable in brain, testis, stomach and intestine. Not significantly detected in any of the sections of embryonic day (E) 14-18, except in embryonic brain.

C. -- SIMILARITY: Belongs to the G-protein coupled receptor 1 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   P52592; Q9R236;

T. Cloning of the rat edg-1 immediate-early gene: expression pattern suggests diverse functions.";

Gene 149:311-336(1994).

C. I. FUNCTION: Receptor for the lysosphingolipid sphingosine 1-phosphate (SIP). SIP is a bioactive lysophospholipid that elicits diverse physiological effect on most types of cells and tissues. This inducible epithelial cell G-protein-coupled receptor may be involved in the processes that regulate the differentiation of endothelial cells. Seems to be coupled to the G(i) subclass of heteromeric G proteins (By similarity).

C. I. SUBCELDULAR LOCATION: Integral membrane protein.

C. I. DEVELOPMENTAL STAGE: First detected at embryonic day 15. At postnatal day 14 detected in skin, spleen, liver, kidney, heart, testicle, lung and brain. At adulthood is most abundant in brain.

C. I. SIMILARITY: Belongs to the G-protein coupled receptor 1 family.
                                                                MEDLINE=95047498; PubMed=7959012; DOI=10.1016/0378-1119(94)90171-6;
